3. M. de Gosson, *Emergence of the Quantum from the Classical: Mathematical Aspects of Quantum Processes.* World Scientific, 2017

4. M. de Gosson, *The Wigner Transform, World Scientific*, series Advanced Texts in Mathematics, 2017

5. M. de Gosson, *Introduction to Born–Jordan Quantization: Theory and applications.* Springer–Verlag, series Fundamental Theories of Physics, 2016

6. M. de Gosson, *Symplectic Methods in Harmonic Analysis and in Mathematical Physics.* Birkhäuser, Basel, 2011

7. M. de Gosson, *Symplectic Geometry and Quantum Mechanics.* Birkhäuser, Basel, series "Operator Theory: Advances and Applications" (subseries: "Advances in Partial Differential Equations"), Vol. 166, 2006

8. M. de Gosson, *The Principles of Newtonian and Quantum Mechanics: the Need for Planck's Constant h; with a foreword by B. Hiley.* Imperial College Press, 2001; Second edition (revised and augmented), 2016 [Best seller series]

9. M. de Gosson, *Maslov Classes, Metaplectic Representation and Lagrangian Quantization.* Mathematical Research Vol. 95, Wiley VCH 1997.

1 Edited Volumes

1. *Landscapes of Time-Frequency Analysis*, eds. Boggiatto, Paolo, Elena Cordero, Maurice de Gosson, Hans G. Feichtinger, Fabio Nicola, Alessandro Oliaro, and Anita Tabacco. Springer Nature, Jan. 2018

2. Proceedings of the Karlskrona Conference in the Honor of Jean Leray, Springer Verlag (2003), *ca* 580 pages. Ed. Maurice de Gosson

3. Maurice de Gosson, La Radio Facile (1957, Série du Faon); Reedited 2002, Éditions de la Charlynou, Karlskrona.
